

### Project Executable Files

|                      |                                 |
|----------------------|---------------------------------|
| <b>Date</b>          | 04 July 2026                    |
| <b>Team ID</b>       | SWTID-2026-7391                 |
| <b>Project Name</b>  | Credit Card Approval Prediction |
| <b>Maximum Marks</b> | 3 Marks                         |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | NA                        |
| 5    | Environment configuration file (.env.example or similar)        | Yes                       |
| 6    | Deployed application URL (if hosted)                            | Yes                       |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | NA                        |
| 9    | Test files and test results                                     | Yes                       |
| 10   | Demo video or walkthrough (if required)                         | Yes                       |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

## Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                   |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | <a href="https://credit-card-approval-prediction-psi.vercel.app">https://credit-card-approval-prediction-psi.vercel.app</a>               |
| <b>Login Credentials (Demo)</b>    | Not Required                                                                                                                              |
| <b>Platform / Hosting Provider</b> | Vercel                                                                                                                                    |
| <b>Repository Link</b>             | <a href="https://github.com/megharammm/credit-card-approval-prediction">https://github.com/megharammm/credit-card-approval-prediction</a> |
| <b>Demo Video Link</b>             | <a href="https://youtu.be/koZr_qDuNeQ">https://youtu.be/koZr_qDuNeQ</a>                                                                   |

## Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Clone the repository**  

```
git clone <repository-url>
```

  
 Open the project folder.
- Navigate to the project directory**  

```
cd Credit-Card-Approval-Prediction
```
- Create a virtual environment (optional but recommended)**  

```
python -m venv venv
```

  
**Activate the virtual environment**  

```
venv\Scripts\activate (Windows) / source venv/bin/activate (Mac/Linux)
```
- Install the required dependencies**  

```
pip install -r requirements.txt
```
- Run the application**  

```
python app.py
```
- Open the application in your browser**  

```
http://127.0.0.1:5000
```

  
 The Credit Card Approval Prediction web application will be displayed.

## Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                         | Workaround / Status                                  |
|------|--------------------------------------------------|------------------------------------------------------|
| 1    | Prediction accuracy depends on dataset quality.  | Improved using preprocessing and model tuning.       |
| 2    | Requires internet connection for hosted version. | Use local deployment if internet is unavailable.     |
| 3    | Supports only predefined input fields.           | Additional features can be added in future versions. |
